KEYWORD INDEX

abnormal proteins, 569
acetyl LDL receptor, 397
age, 233, 541
age determination, 495
age-related changes, 441, 525, 573
aging, 3, 45, 57, 65, 77, 97, 123, 171, 203, 217, 247, 269, 299, 365, 375, 397, 453, 487, 589, 601
  and circulation, 141
  correlations of space effects and, 123
aging erythrocytes, 315, 327
amylase, 57
ascorbic acid, 487
autofluorescence, 89
autoimmune antibodies, 315, 327

β-adrenergic blockade, 65
B-lymphocytes, 541
baroreflexes, 65
bed rest, 189
biokinetics, 589
biomechanics, 171
biopsy, 17
biosynthesis, 375
blood, 541
blood pressure, 65
bone cells, 171
bone control system, 203
bone loss, 171
bone matrix, 171
bone mechanical strain, 203
bone mineral, 171
  density, 189
bone strength, 171

calorie, 97
cardiovascular physiology, 163
catalase, 29
cell growth, 247
cell loss, 281
cell size, 315, 327
cellular identification, 441
cellular immune response, 289
central venous pressure (CVP), 163
cerebral cortical cell, 365
chaos theory, 569
cholinergic blockade, 65
circadian rhythms, 233
  human, 217
cold tolerance, 601
collagen(s), 3, 375
collagen denaturation, 467
conjugated Schiff base, 495
contaminating polar pteridines, 495
continuous normobaric hypoxia, 77
Crustacea, 495
culture, 365, 397

dermis, 3, 17
development, 299
dietary restriction, 89, 453
differential rates of change, 467
differentiation, 3
disposable soma theory, 569
DNA polymerase, 97, 453
DNA repair, 299
dominance, 479
Drosophila, 385, 487

EBV, 541
echocardiography, 163
endothelial cells, 397
enzyme activities, 77
erythrocytes, aging, 315, 327
erythrocytes, senescent, 327
exercise, 189
extracellular matrix, 3, 375

feeding, 479
fiber variability, 467
fibroblast, 3
fibronectin, 375
fish, 495
flow cytometry, 315, 327
fluorescent material, 365
free radicals, 299, 385, 569
frequency, 541

gastric mucosal injury, 45
gastrin, 57
genetic variation, 269
genetics, 299

geriatric conditions, 37
glomerular cell membrane, 573
glutathione peroxidase, 29
glycosaminoglycans, 573
gravity, 299
growth hormone, 257
  bioassayable, 257
  immunoassayable, 257

headward fluid shift, 163
heart rate, 65
hepatic tissue, 453
homeostasis, 171
human, 233, 315, 327
human diploid cell strains, 441
  new, 525
human skin fibroblast, 29

immobilization, 189
immunological aging, 569
immunopotentiation, 281
immunoreactive ODC, 45
immunosenescence, 281
inhibition of TSH by T_3, 347
insects, 495
interleukin-2, 269
isozyme polymorphism, 441

kidney, 573

lectins, 315, 327
licking, 357
life-history traits, 299
life span, 385, 479, 487
light, 217
lipid peroxidation, 385
lipid pigments, 89
lipofuscin, 89, 365
lipofuscin solvent extraction, 495
longevity, 299
lower body negative pressure, 141
lymphocyte activity, 289

melatonin, 217
metabolism, 589
mice, 357, 453, 601
  DBA/2 male, 479
  skin, 375
microgravity, 123, 131, 247, 257, 281
mitogen-induced lymphoproliferation, 269
modulation, 281
molecular aging, 569
mRNA, 57
muscular metabolism, 77
mutants, 299

nematodes, 299
nutrition, 281

ODC gene expression, 45
old age, 347
ornithine decarboxylase, 45
orthostatic hypotension, 141
orthostatic tolerance, 163
osteoporosis, 171, 203
oxidation-reduction potential, 37
oxidative stress, 299

pancreas, 57
parasympathetic, 65
perioral muscles, 89
pharmacological treatment, 77
phase shift, 233
phospholipase A_2, 385
physiological adaptation, 131
pituitary, 257
postural changes, 141
proteoglycans, 573
pyridoxal, 589
pyridoxal-5′-phosphate, 589

qualitative changes, 281

radiation, 299
radiobiology, 299
ranking, 479
rat(s), 57, 347
  aging, 257
  conscious, 65
  spaceflown, 257
  tail-suspended, 257
rat aorta, 397
rat tongue muscle, 89
remodeling of bone, 171

salivary glands, 357
Sarcophaga bullata, 495
senescence, 3
senescent erythrocytes, 327
sialidase treatment, 315, 327
skeletal muscle pump, 141
skin, 357
  mouse, 357
sleep, 217, 233
space, 299
space adaptation, 247

spaceflight, 123, 163, 189, 203, 247, 257, 269
  human response to, 131
  manned, 217
space immunity, 289
space life sciences, 123, 131
space medicine, 131
Space Shuttle, 163
Space Station Freedom, 131
spontaneous cells lines, 541
storage excretion, 495
subordination, 479
superfused pituitary fragments, 347
superoxide dismutase, 29, 385
survival, 479
susceptibility to leukemia virus, 479
sympathetic, 65
Syrian hamster, 3, 17

T cells, 281
tendon group differences, 467
thoracic blood volume, 141
thyroid, 601
thyroid hormones, 601
TIG-7, 525
  comparison with TIG-1, 525
tissue grafting, 281
TRH-induced TSH release, 347
trypsin, 57

upright posture, 141

vitamin B-6, 589
vitamin C, 487
vitamin E, 365

weightlessness, 141, 163
wound healing, 17, 357
